Bug findings	2
Severity overview	2

Security findings

Unchecked loginUrl redirect src/App.tsx: 103-105

- Takes `loginUrl` from `/api/invitations/start` and redirects with `window.location.assign` without validation.
- With default base `/`, a value starting with `//` becomes a protocol-relative URL that leaves the origin.

Sign-out ignores fetch result src/api.ts: 155-163

- Posts to `/logout` then navigates to `/` without checking `res.ok`.

Bug findings

Stale editor state when inline card stays open src/pages/AdminDestinations.tsx: 122-132

- Renders `{editor && <DestinationEditor />}` without a `key` and the editor copies props into `useState` once.

Severity overview

Finding	Severity	Status
Unchecked loginUrl redirect	Medium	Open
Sign-out ignores fetch result	Low	Open
Server error text shown directly	Low	Fixed
Stale editor state	Medium	Open
One role controls two forms	Low	Fixed

Verification limits

Review used frontend source and local build checks. Backend access and Ping SSO credentials were not available, so end-to-end flows could not be exercised.
